Fergie and Sheryl Crow put their best — and newly tweaked — faces forward.

KNIFESTYLES SPECIAL

FERGIE

THEN

NOW

BOOM boom pow — just like that, the Black Eyed Peas singer has transformed her face with an estimated \$30,000 makeover! During a March 17 performance on *American Idol*, Fergie looked closer to her 36 years than she did in February. How'd she turn back the hands of time? Brow lift, eyelid lift and filler in her cheek area, believes NYC-based plastic surgeon Dr. Mark Schwartz, who has not treated the singer. "Fergie's forehead looks tighter, her jaw line is sharper. She looks fresh-faced and years younger because her skin is so taut and smooth, and it creates a well-rested look," Fergie — who once admitted, "I would be open to Botox" — seems to have really invested in it. NYC-based plastic surgeon Dr. Norman Rowe, who has also not treated Fergie, says it looks like she had the filler injected into her "brow, between her eyes and her crow's-feet area" to soften the lines. Also, he adds, "her skin texture has improved. This would be accomplished by performing a light chemical peel or laser resurfacing procedure."

SHERYL CROW

THEN

NOW

She got the "Crow" in crow's feet! The 49-year-old singer had deep wrinkles around her eyes last November, but in new photos from March 23, "it appears she had Botox in and around her crow's-feet, brows and forehead," New Jersey-based plastic surgeon Dr. Michael Gernov, who has not treated her, tells *Star*. And that's not all! Dr. Rowe, who also has not treated Sheryl, thinks she had a laser resurfacing treatment to smooth out her fine lower eyelid lines. "It also looks like she had fillers placed in her laugh lines to soften the lines when smiling, as well as a chemical peel, because her skin texture has improved."

“Sheryl looks like she’s been freshened up with Botox.”

— Dr. Rowe tells *Star*
